UK PFA “UK Plan for Frequency Authorisation
Section 2

Foreword

2.2 Nothing in this UK Radio Interface Requirement shall preclude the need for equipment to comply with Directive 1999/5/EC.

2.3 It is required by the Wireless Telegraphy Act 1949 that no radio equipment is installed or used in the UK except under the authority of a licence granted by or otherwise exempted by regulations made by Ofcom. It is a condition of such a licence or exemption regulations as appropriate that, in order to be installed or used in the UK, the equipment must meet the minimum requirements specified in this UK Interface Requirement for the stated equipment types and for the stated frequency bands. Nothing in this UK Interface Requirement shall preclude equipment from being placed on the market in the UK that complies with the ‘essential requirements’ specified in Directive 1999/5/EC.

2.4 The requirements given in the main body of this UK Radio Interface Requirement will apply to the licensing of Spectrum Access in the bands 412 to 414 MHz paired with 422 to 424 MHz.

2.5 This UK Radio Interface Requirement will be revised as necessary, for example to take into account:

i) current technology developments for reasons related to the effective and appropriate use of the spectrum in particular maximising spectrum utilisation;

ii) changes to the available spectrum allocated for Spectrum Access in the bands 412 to 414 MHz paired with 422 to 424 MHz;

and

iii) the adoption of appropriate European Harmonised Standards.

2.6 All UK Radio Interface Requirements notified under Directive 1998/34/EC will be published and will be made available free of charge from the Ofcom website at http://www.ofcom.org.uk/radiocomms/ifi/tech/interface_req/

2.7 Further information on this UK Radio Interface Requirement can be obtained from the technical enquiry contact given at the back of this document.
Section 3

Minimum requirements for operation within the UK

3.1 The minimum requirements in this document are made for reasons related to the effective and appropriate use of the radio spectrum, in particular maximising spectrum utilisation.

3.2 This UK Radio Interface Requirement gives a high level description of how the spectrum in the UK is used for Spectrum Access in the bands 412 to 414 MHz paired with 422 to 424 MHz. It does not prescribe technical interpretation of the 'essential requirements' of Directive 1999/5/EC.

3.3 This UK Radio Interface Requirement therefore stipulates the necessary usage parameters for the licensing of Spectrum Access in the bands 412 to 414 MHz paired with 422 to 424 MHz in the UK. Table 3.1 contains the relevant usage parameters. These taken together with the ‘essential requirements’ detailed in Article 3.2 of Directive 1999/5/EC constitute the minimum requirements for Spectrum Access in the bands 412 to 414 MHz paired with 422 to 424 MHz within the UK. Nothing in this UK Interface Requirement shall preclude equipment from being placed on the market in the UK that complies with the ‘essential requirements’ specified in Directive 1999/5/EC.

3.4 The technical parameters specified in the UK Radio Interface Requirement are applied to achieve the desired level of compatibility for Spectrum Access in the bands 412 to 414 MHz paired with 422 to 424 MHz and with other radiocommunications services, whilst promoting enterprise, innovation and competition.

3.5 This UK Radio Interface requirement provides the necessary technical information which facilitates access to the bands 412 to 414 MHz paired with 422 to 424 MHz, by making clear the assumptions that are made in planning the use of this spectrum in the UK. It is not the intention of this UK Radio Interface Requirement to duplicate or impose any additional ‘essential requirements’ of the Directive 1999/5/EC on products. Any specified parameters within this document are for the purpose of identifying product options and not as a national de facto product requirement.
### Section 3

Table 3.1 Minimum requirements for Spectrum Access in the bands 412 to 414 MHz paired with 422 – 424 MHz

<table>
<thead>

<th>Mandatory Elements (1-10)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Frequency bands</td>
<td>412 to 414 MHz paired with 422 to 424 MHz</td>
</tr>
<tr>
<td>These frequency bands are split into four paired blocks as follows:</td>
<td></td>
</tr>
<tr>
<td><strong>Block</strong></td>
<td><strong>Lower frequency band</strong></td>
</tr>
<tr>
<td>A</td>
<td>412.0 – 412.5 MHz</td>
</tr>
<tr>
<td>B</td>
<td>412.5 – 413.0 MHz</td>
</tr>
<tr>
<td>C</td>
<td>413.0 – 413.5 MHz</td>
</tr>
<tr>
<td>D</td>
<td>413.5 – 414.0 MHz</td>
</tr>
</tbody>
</table>

Please note that the necessary bandwidth of any transmission (as defined in ITU-R Recommendation ITU-R SM.328) must fall entirely within one of the four paired blocks defined above.

2 Radio service | Mobile Service  |
3 Application | Spectrum Access  |
4 Channelling modulation | Not specified  |
5 Transmit power limit | The maximum EIRP within the lower frequency band of any of the blocks defined in 1 above shall be 42 dBm.  
The maximum EIRP within the upper frequency band of any of the blocks defined in 1 above shall be 47 dBm/25 kHz. In addition, the maximum EIRP shall be 56 dBm.  |
6 Channel occupation rules | Not specified  |
7 Duplex type/separation | Not specified  |
8 Licensing regime | WT Act licence required  |
9 Additional essential requirements (art. 3.3) | -  |
10 Frequency planning assumptions |  |
