UK Interface Requirement 2060

Ground based VHF radio equipment at Aeronautical Stations of the Aeronautical Mobile (R) Service for Mode 2 and/or Mode 4 data link communications.

Publication date: Feb 2006
Version: 1.0
98/34/EC Notification number: 2005/504/UK

Section 2

Foreword

2.2 Nothing in this UK Radio Interface Requirement shall preclude the need for equipment to comply with Directive 1999/5/EC.

2.3 Nothing in this UK Radio Interface Requirement shall preclude the need for equipment to comply with Annex 10 to the convention on International Civil Aviation, where appropriate.

2.4 It is required by the Wireless Telegraphy Act 2006 that no radio equipment is installed or used in the UK except under the authority of a licence granted by or otherwise exempted by regulations made by Ofcom. It is a condition of such a licence or exemption regulations as appropriate that, in order to be installed or used in the UK, the equipment must meet the minimum requirements specified in this UK Interface Requirement for the stated equipment types and for the stated frequency bands. Nothing in this UK Interface Requirement shall preclude equipment from being placed on the market in the UK that complies with the 'essential requirements' specified in Directive 1999/5/EC.

2.5 The requirements given in the main body of this UK Radio Interface Requirement will apply to ground based VHF AM(R)S radio equipment in the UK.

2.6 This UK Radio Interface Requirement will be revised as necessary, for example to follow:

i) current technology developments for reasons related to the effective and appropriate use of the spectrum in particular maximising spectrum utilisation;

and

ii) changes to the available spectrum allocated for aeronautical mobile (R) services.

2.7 All UK Radio Interface Requirements notified under Directive 1998/34/EC will be published and will be made available free of charge from the Ofcom web-site at http://www.ofcom.org.uk

2.8 Further information on this UK Radio Interface Requirement can be obtained from the technical enquiry contact given at the back of this document.
Section 3

Minimum requirements for operation within the UK

3.1 The minimum requirements in this document are made for reasons related to the effective and appropriate use of the radio spectrum, in particular maximising spectrum utilisation.

3.2 This UK Radio Interface Requirement gives a high level description of how the spectrum in the UK is used for ground based VHF radio equipment in the aeronautical mobile (R) service. It does not prescribe technical interpretation of the ‘essential requirements’ of Directive 1999/5/EC.

3.3 This UK Radio Interface Requirement therefore stipulates the necessary equipment parameters for the licensing of ground based VHF AM(R)S radio equipment in the UK. Table 3.1 contains the relevant equipment parameters. These taken together with the ‘essential requirements’ detailed in Article 3.2 of Directive 1999/5/EC constitute the minimum requirements for the installation and use of ground based VHF AM(R)S radio equipment in the aeronautical mobile (R) service within the UK. Nothing in this UK Interface Requirement shall preclude equipment from being placed on the market in the UK that complies with the 'essential requirements' specified in Directive 1999/5/EC.

3.4 The technical parameters specified in the UK Radio Interface Requirement are applied to achieve the desired level of compatibility within the aeronautical mobile (R) service and with other radiocommunications services, whilst promoting enterprise, innovation and competition.

3.5 This UK Radio Interface requirement provides the necessary technical information which facilitates access to the aeronautical mobile (R) spectrum by making clear the assumptions that are made in planning the use of the aeronautical mobile (R) spectrum in the UK. It is not the intention of this UK Radio Interface Requirement to duplicate or impose any additional ‘essential requirements’ of the Directive 1999/5/EC on products. Any specified parameters within this document are for the purpose of identifying product options and not as a national de facto product requirement.

\(^1\) The use of this band by the Aeronautical Mobile (R) service is subject to agreement obtained under the procedures in Article 14 of the Radio Regulations. The band should not be used for this purpose until it is no longer required for Aeronautical Radionavigation.

\(^2\) CSC - Common Signalling Channel reserved on a worldwide basis for VHF digital link (VDL) using Mode 2 VDL modulation scheme and carrier sense multiple access (CSMA).

\(^3\) Radio site clearance considerations may impose restrictions on maximum power use on certain frequency assignments. (Radio site clearance is required for any aeronautical station with an e.r.p. greater than 18dBW (50W) and/or antenna height greater than 30 metres above ground level, or where an existing structure is increased in height by greater than 5 metres.)

\(^4\) DOC - Designated operational coverage (See ITU RR 45.1.1)

\(^5\) See Reference 1.10 Schedule 8 Aeronautical Parts 1, 2 & 3 for limitations on WT Act Licences
Section 4

Additional performance parameters
(informative)

ETSI EN 301 841-1 V1.2.1 (2003-08) European Standard (Telecommunications series)
Electromagnetic compatibility and Radio spectrum Matters (ERM); VHF air-ground
Digital Link (VDL) Mode 2; Technical characteristics and methods of measurement for
ground-based equipment; Part 1: Physical layer and MAC sub-layer VDL mode 2
physical layer.

ETSI EN 301 841-2 V1.1.1 (2004-03) European Standard (Telecommunications series)
Electromagnetic compatibility and Radio spectrum Matters (ERM); VHF air-ground
Digital Link (VDL) Mode 2; Technical characteristics and methods of measurement for
ground-based equipment; Part 2: Upper layers VDL mode 2 data link layer

ETSI EN 301 842-1 V1.2.1 (2005-04) European Standard (Telecommunications series)
Electromagnetic compatibility and Radio spectrum Matters (ERM); VHF air-ground
Digital Link (VDL) Mode 4 radio equipment; Technical characteristics and methods of
measurement for ground-based equipment; Part 1: EN for ground equipment VDL mode
4 ground equipment, physical layer

ETSI EN 301 842-2 V1.3.1 (2005-04) European Standard (Telecommunications series)
Electromagnetic compatibility and Radio spectrum Matters (ERM); VHF air-ground Data
Link (VDL) Mode 4 radio equipment; Technical characteristics and methods of
measurement for ground-based equipment; Part 2: Data link layer VDL mode 4 data link
layer

ETSI EN 301 842-3 V1.1.1 (2005-02) European Standard (Telecommunications series)
Electromagnetic compatibility and Radio spectrum Matters (ERM); VHF air-ground
Digital Link (VDL) Mode 4 radio equipment; Technical characteristics and methods of
measurement for ground-based equipment; Part 3: Additional broadcast aspects VDL
mode 4 Additional broadcast aspects

ETSI EN 301 842-4 V1.1.1 (2005-02) European Standard (Telecommunications series)
Electromagnetic compatibility and Radio spectrum Matters (ERM); VHF air-ground
Digital Link (VDL) Mode 4 radio equipment; Technical characteristics and methods of
measurement for ground-based equipment; Part 4: Point-to-point functions VDL mode 4
Point to Point functions.

It is suggested that manufacturers refer to the appropriate volumes of Annex 10 to the
Convention on International Civil Aviation, aeronautical telecommunications, as

Equipment which complies with this radio interface specification is additionally subject to
the putting into service provisions of Article 10.1 of Regulation (EC) No. 552/2004 of 10
March 2004 on the interoperability of the European Air Traffic Management Network (the
Interoperability Regulation)
